

SUMMARY OF GLOVE DATA

- All the gloves with the exception of OCNails tested well below YouVeeShield % of blocking capabilities.
- OCNails glove shrinks after one wash, leaving the wrist of the customer exposed.
-
- All fingerless gloves become “less effective” after washing. You will never know exactly by how much.
- This would make this option not a viable one for a large salon to use because at some point, the gloves will not block any UV at all.
